SCANNING RESOLUTION

Please scan your photo as prescribed below, and do not do any editing work on your photo before sending to me.

SCANNING A 4X6, WALLET, OR SMALLER:

Scan in at 800 dpi or (preferably) higher if your computer will allow it. *I scan these at 1200 dpi to 2400 dpi. I can resize a very small photo as long as it is scanned in at a high resolution. The higher it's scanned in at the more it can be enlarged. I recommend scanning a very small photo in as high of a resolution as your computer will allow you to do.

SCANNING A FIVE BY SEVEN:

Scan in at 300 dpi *If you want it enlarged or the subject brought in closer please scan in at 400 to 600 dpi.

SCANNING AN EIGHT BY TEN:

Scan in at least 300 dpi *If you want it enlarged or the subject brought in closer please scan at 400 dpi or higher.

**Never resize a photo after it has been scanned in. All that does is to add white dots rather than true resolution.

To enlarge a photo don't add inches, but scan at a higher dpi. For very small photos scan as high as your computer will allow.
